

Name: \_\_\_\_\_

## Interview an organism

Organism: \_\_\_\_\_

- Draw and label observations

- Examples of the types of questions you could ask that can be answered by watching (observing):
  - What does it look like? What is it doing? How many are there? In what part of the habitat do they spend most of their time? What do they eat? Etc.
  - Think of more questions!

Write down a question and the observations you made that answered your question.
